Meta-analysis of DTT studies

Reichow & Wohler, 2009

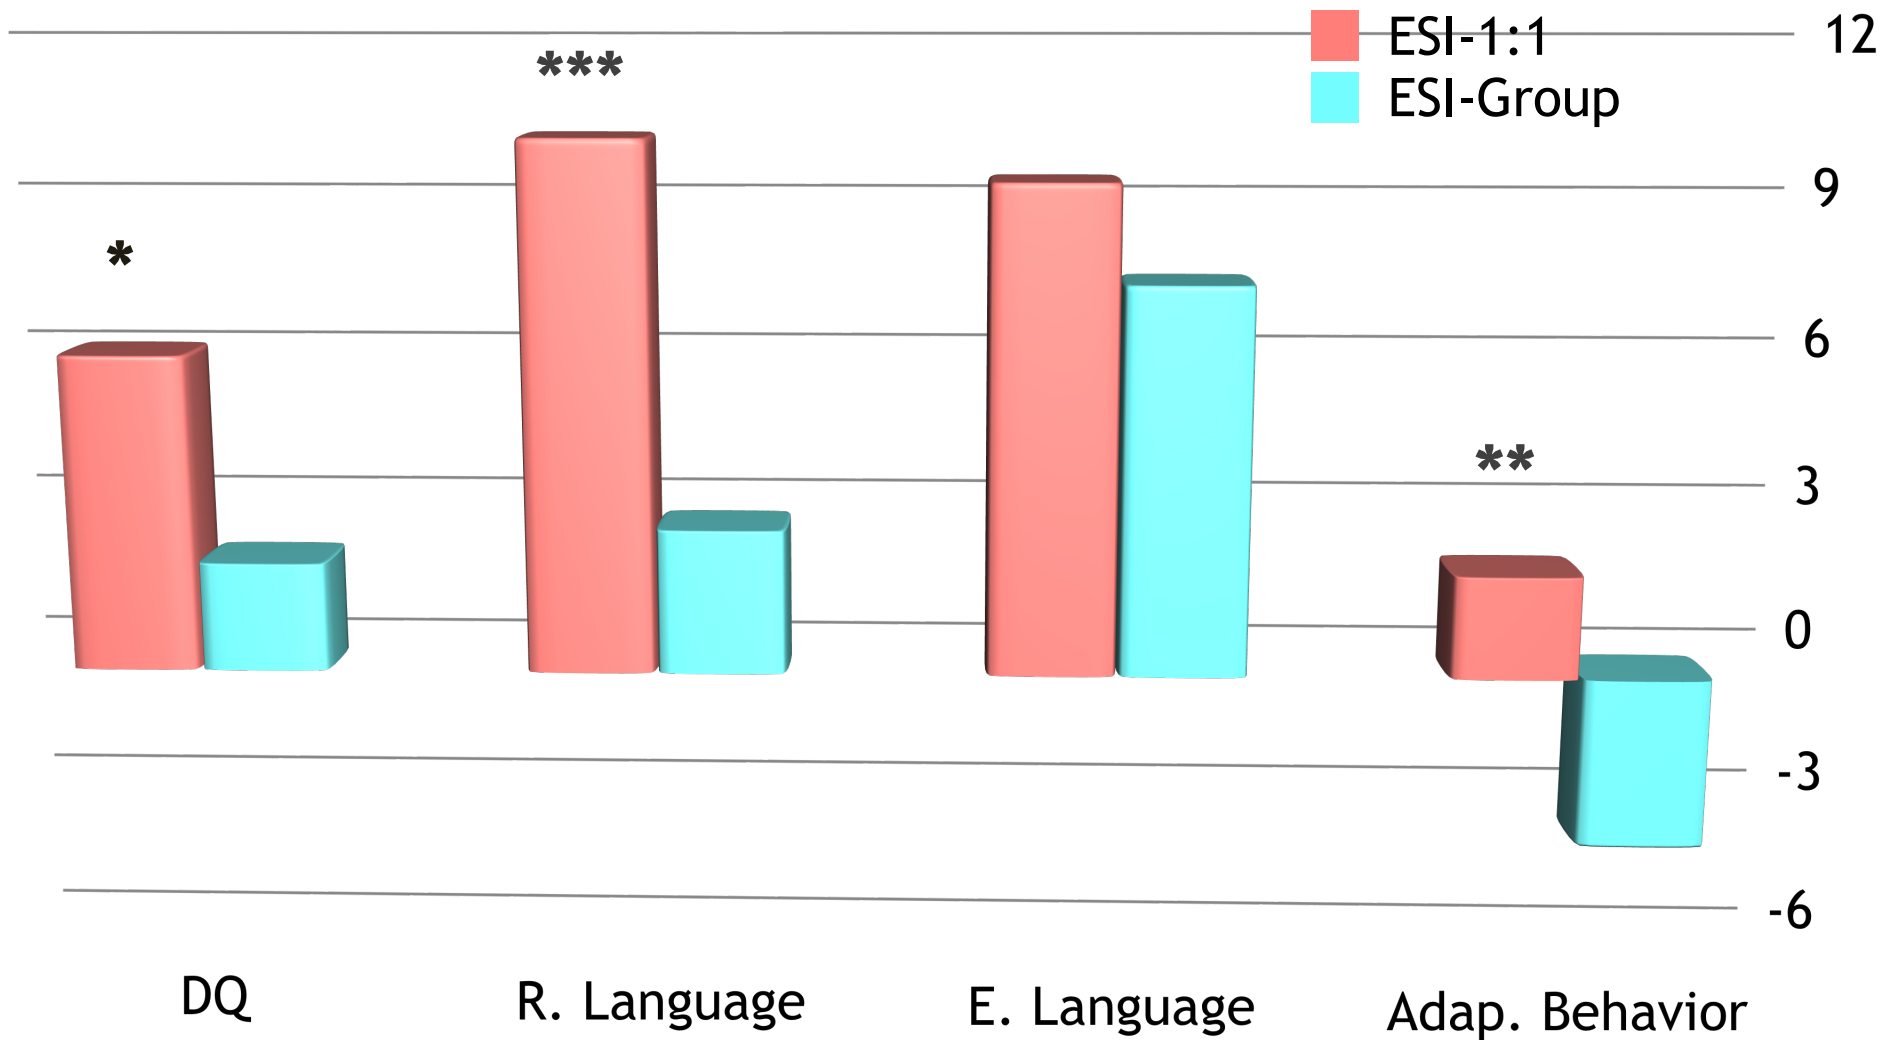

High intensity, global intervention models. How much can impairment be reduced?

(Rogers & Vismara, 2013)

Remington 2007	Lovaas Early Intensive Behavioral Intervention
Wetherby et al, 2006, 2015	Early Social Interaction
Dawson, Rogers et al 2010	Early Start Denver Model (ESDM)

Wetherby ESI 2014: change scores

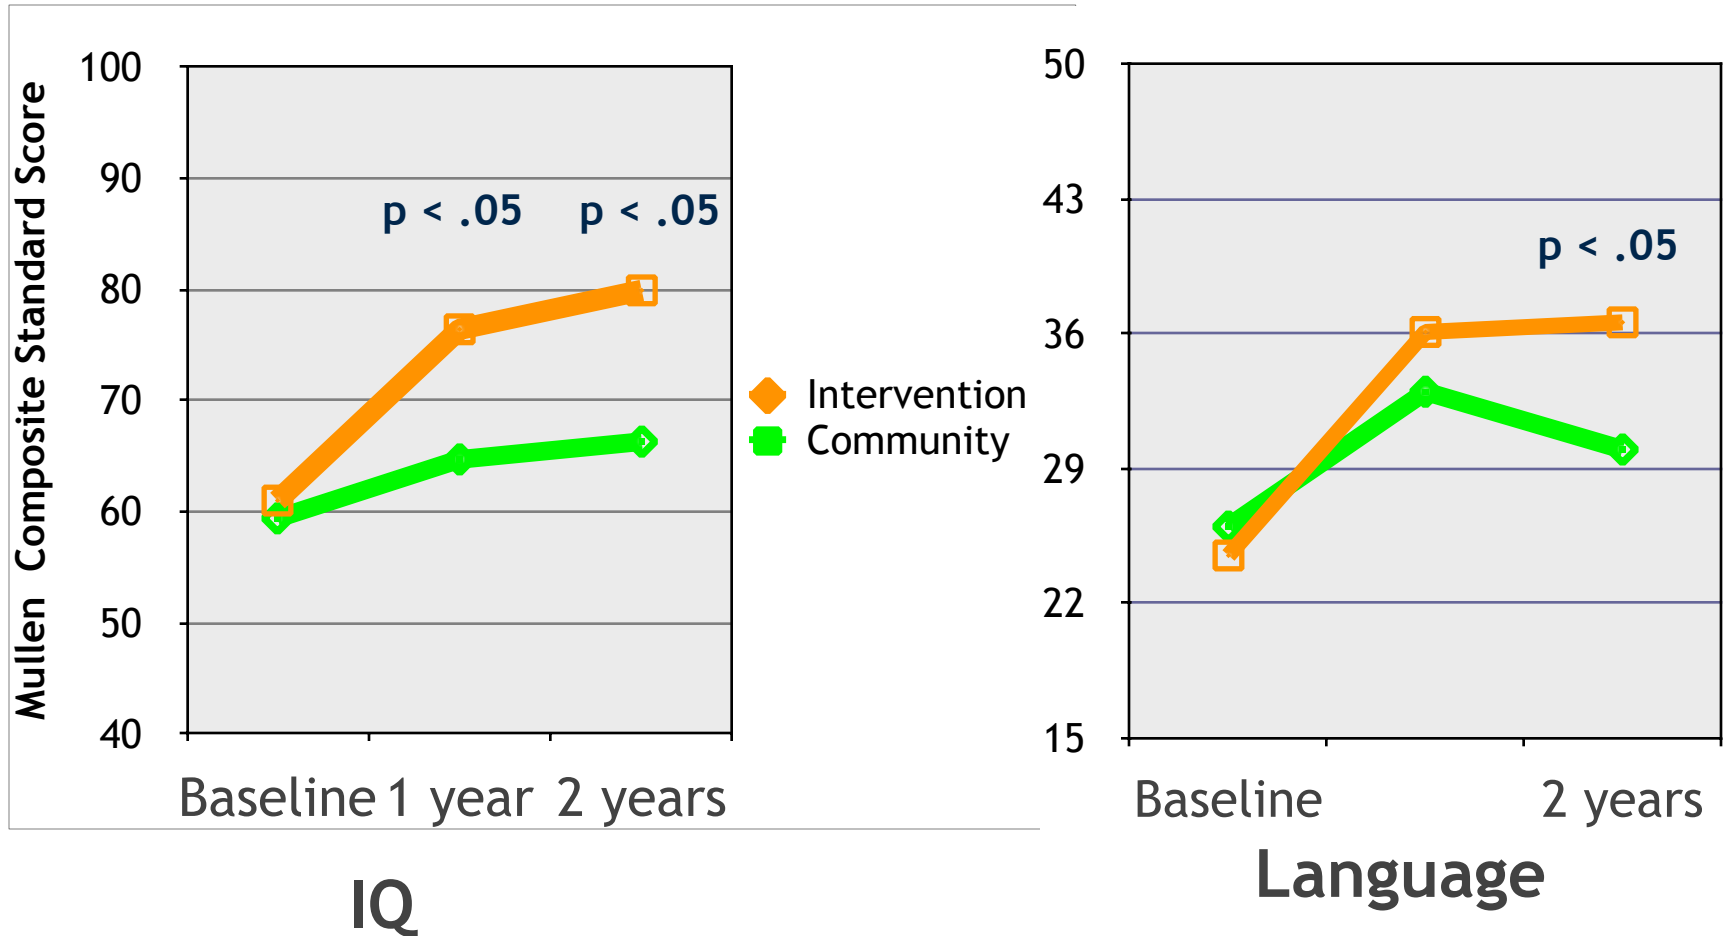

Early Start Denver Model

ASD specific
Comprehensive
Interdisciplinary
Integrates developmental and
learning science
Evidence-based teaching
Data-based

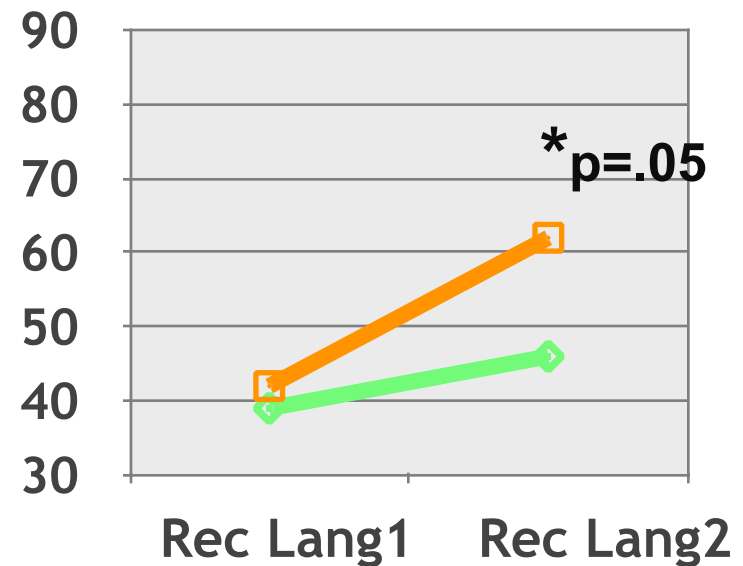

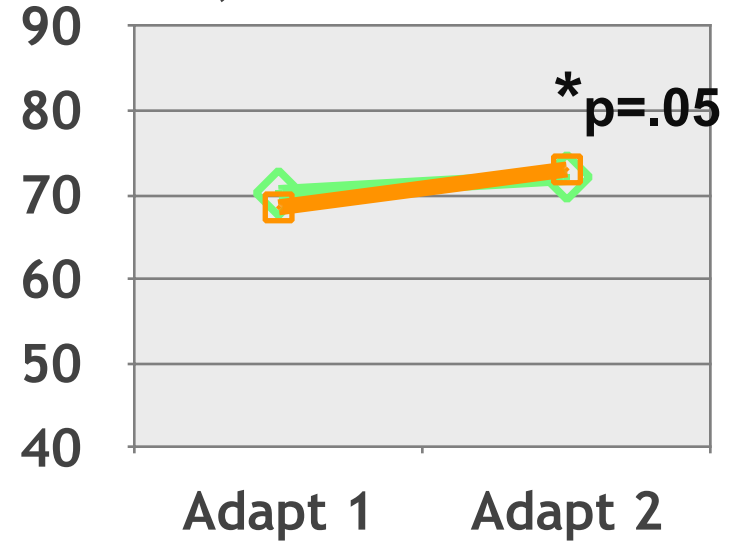

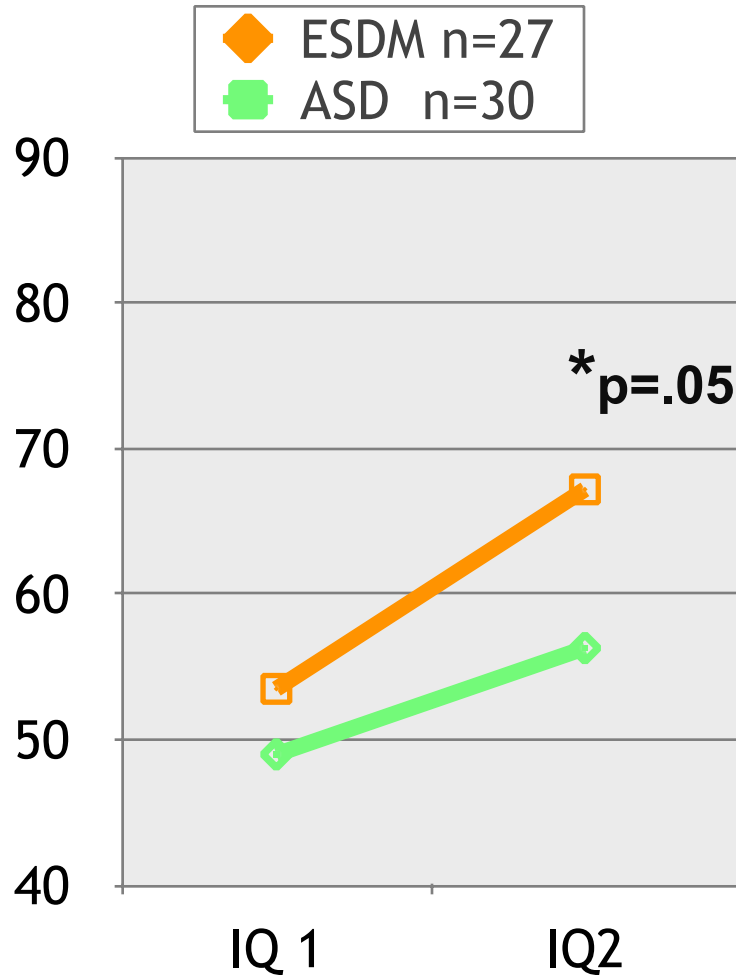

2010 outcomes from RCT of ESDM versus community care (Dawson et al., 2010)

(Dawson NIMH U54 MH66399)

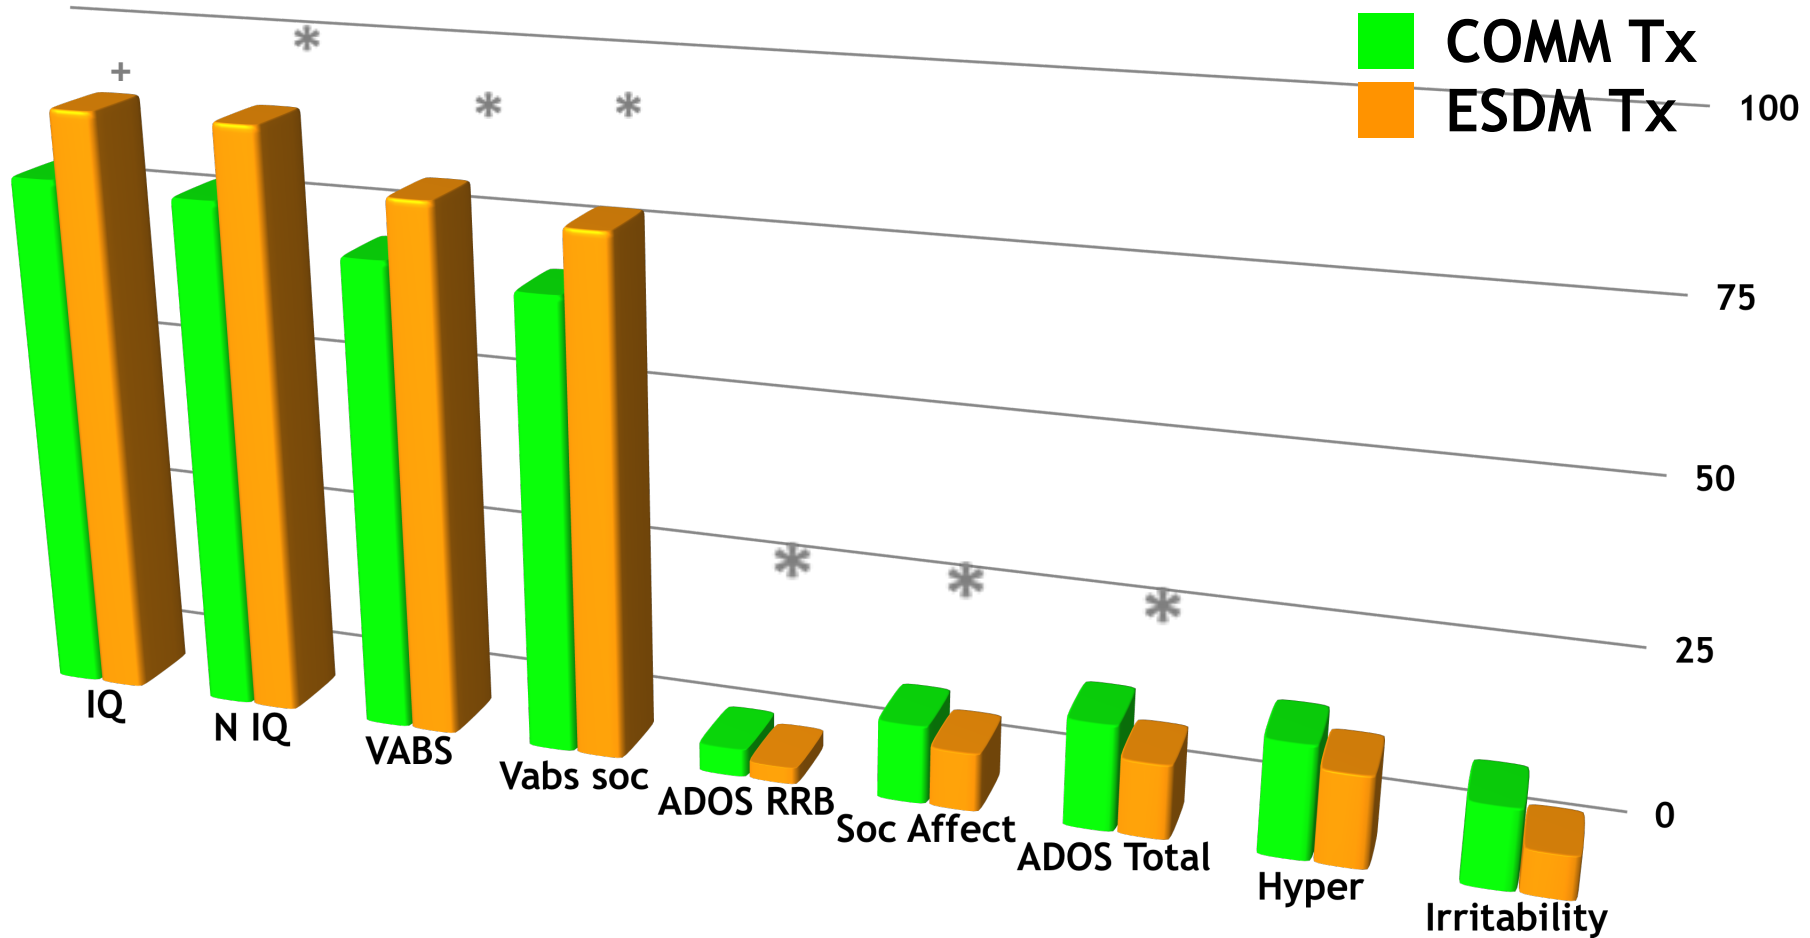

Replication: ESDM in 1:4 groups

Vivanti, Dissanayake et al., 2014

Gains last for years

(Estes et al., 2015)

High intensity, comprehensive interventions

Strengths

- Significant change
- In multiple areas
- Unified approach

Weaknesses

- Hard to isolate effective elements
- Cost
- Complex to learn and deliver

Low intensity models:
target a specific change
with a specific procedure

Kasari et al, 2015	JASPER: Joint attention, engagement, symbolic play
Ingersoll et al, 2012, 2012	Reciprocal Imitation: RIT
Green, et al, 2015	VIPP: Video Interaction for Producing Positive Parenting
Steiner et al, 2013	PRT: Pivotal Response Training
Baranek et al, 2015	Responsive Teaching + social commun, sensory reg

Parent Implemented Interventions

Effective with other groups

Allow for intensity, generalization

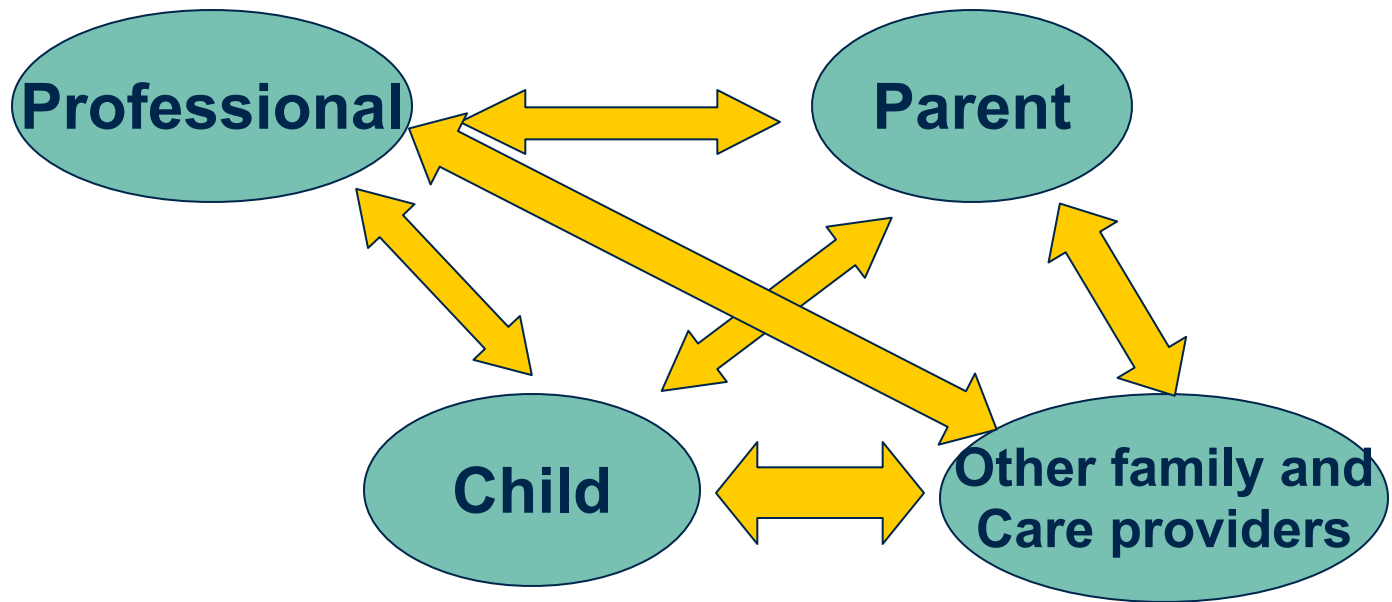

Implementable using distance technology

More than 5 with demonstrated efficacy

Process: How many
interventionists think about it

How it really goes

**New:
Parent-ESDM
from a distance;
effects
on child
communication**

**Vismara et al,
in press**

Parallel Processes

Procedural & declarative
Hands on, guided learning
Goal focused, self-assessed
Much practice
Mastery

Low intensity models

Strengths

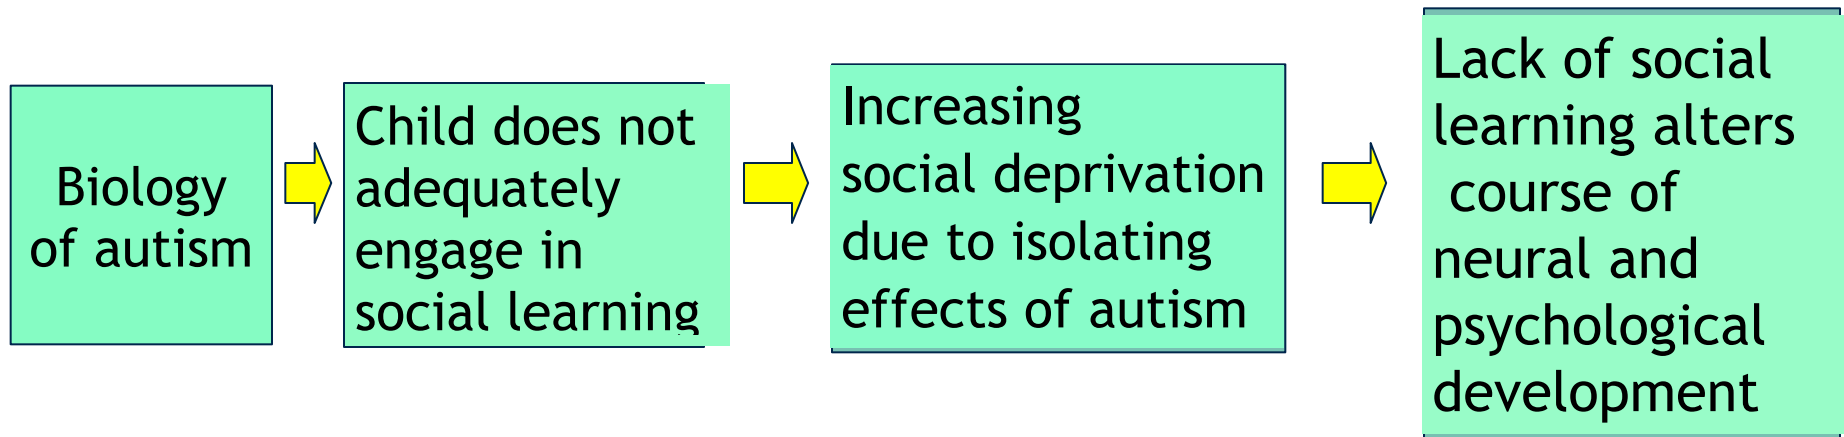

- Effective
- Low cost
- Low intensity
- Brief
- Parent learning

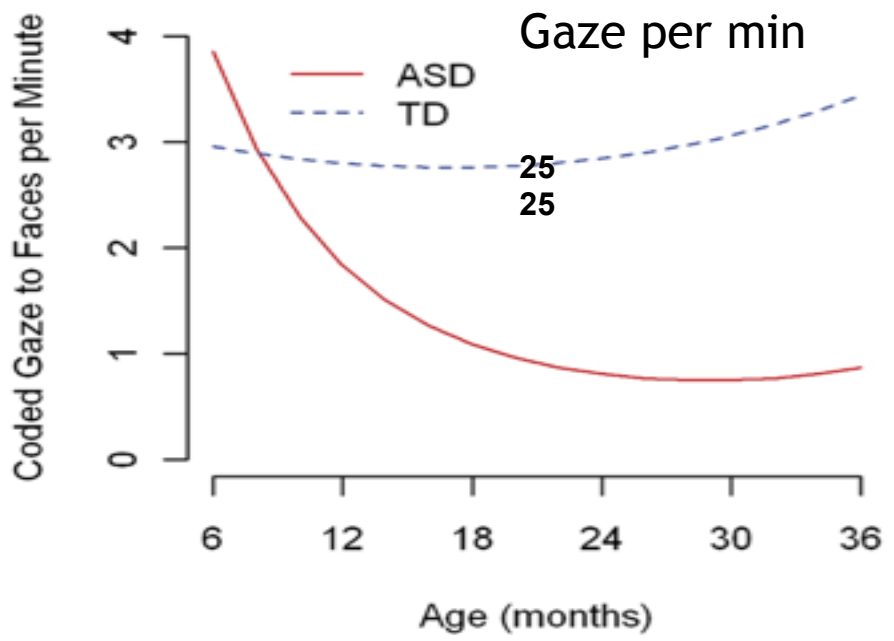

Weaknesses

- No long term data
- Addresses a few needs
- Not meant to stand alone
- Requires variety of plans to address all needs

Model: Interactional Effects of Autism

Mundy 1995, Dawson et al.1998

DQ scores of infant sibs (n=48) who develop ASD and comparisons (n=92) (Ozonoff et al)

Can we begin sooner?

Rogers & Vismara, NICHD R21 HD065275; Autism Speaks

Decreased gaze, social interest

Little intentional communication

Little coordinated voice, gaze, gesture

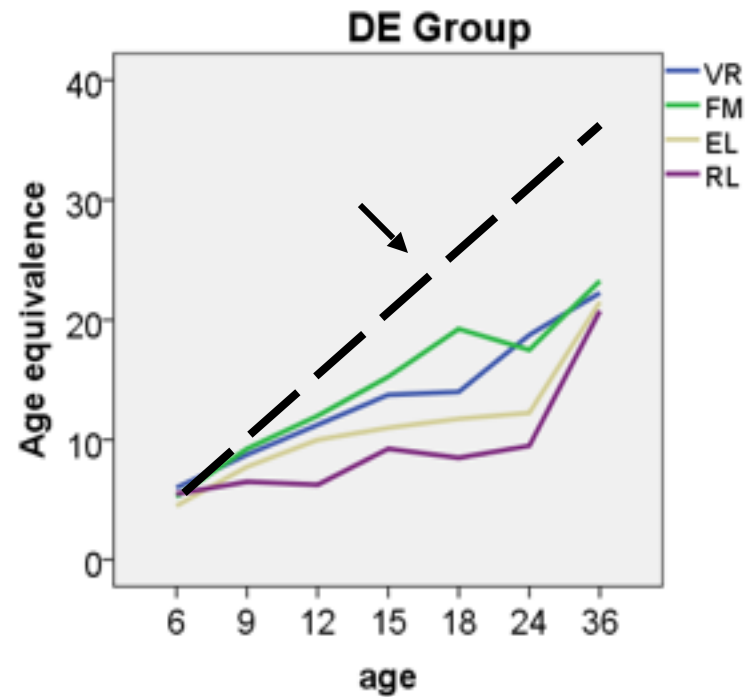

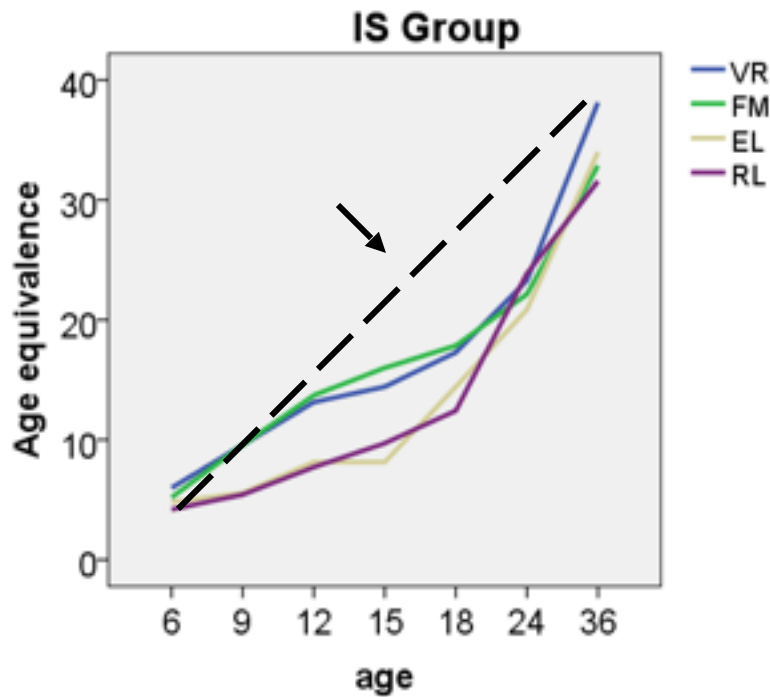

Delayed phonemic development

Visual fixations on objects

Atypical repetitive behaviors

Treated Group/Refused Group

Five comparison groups: autism onset, declined enrollment, high risk (sibs), low risk, treated

The most effective interventions

Majority have skills in normal range by 6-7.

90% (ESDM) spontaneous, generative, phrase or sentence speech, by 4.

How is this possible?

Phenotype is emerging

Phenotype is emerging

Neural readiness

Growth or compensation?

How do we move forward?

to find them?

to diagnose them?

to treat them?

Find them

30-50% concerns by 12 months

Age of first concern = 18 - 19 months

Age of U.S. diagnosis 48 - 53 months (CDC, 2012)

Find them

pediatric contacts

news articles

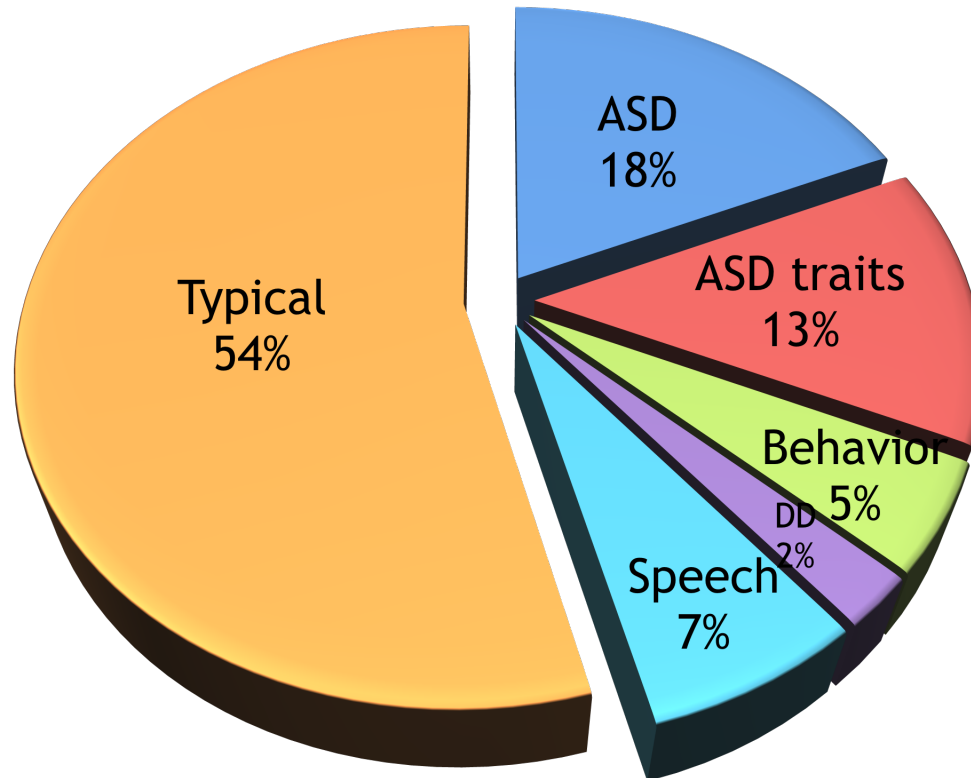

parent advocacy groups

autism treatment groups

child care educational groups

Find them

Monitor sibs

Age 3 Clinical best estimate outcomes
Of 294 infant sibs Ozonoff et al, 2014

Diagnose them

Use formal tools: screeners and tests

Good screeners

Infant-Toddler Checklist ([ITC](#)) 6 - 24 months

<http://firstwords.fsu.edu/pdf/checklist.pdf>

Modified Checklist for Autism in Toddlers 16 - 30 months <https://www.m-chat.org>

Good tests

Autism Observation Scale for Infants (AOSI)

ADOS-Toddler Module

Infant mental health mindset

Early diagnosis provisional, descriptive

Goal of early diagnosis is early treatment

Cannot predict outcomes from infant behavior

If parents did not want to know, they would not be here

Treat them

Act for earlier evidence-based services

- Learn, provide a parent-implemented tx
- Find those already seeing infants and network
- Use your influence in public children's services
- We need to help families get more treatment availability

Prevent

Reverse

Improve
